

Inhalant Abuse in Maine High Risk Youth by County

What is being used: Inhalants include fuels (butane, propane, gasoline), solvents, paints and paint thinners, glues and adhesives, engine starting sprays, computer cleaners, permanent magic markers, dry erase markers, typewriter correction fluid, nail polish remover, dry-cleaning agents, certain gasses (from air conditioners and fire extinguishers, nitrous oxide from cans of whipped cream), air fresheners and any product packaged in an aerosol can.

Patterns of use: There are many patterns of inhalant abuse. These patterns vary across the State of Maine and by age, sex, and race/ethnicity. For some children, this is not just dangerous experimentation but an addiction. Use may start as early as the third grade. Younger children may just abuse inhalants while older youth are more likely to abuse inhalants with alcohol and other drugs.
